

Binary Tree Solutions

```
Solution 1:
Time Complexity: o(h)
Space Complexity: o(1)
import java.util.*;
class Solution{
static class Node{
       int data;
       Node left;
       Node right;
};
static Node newNode(int data){
       Node temp = new Node();
       temp.data = data;
       temp.left = temp.right = null;
       return (temp);
}
static boolean isUnivalTree(Node root){
       if (root == null){
               return true;
       }
       if (root.left != null
               && root.data != root.left.data)
               return false;
       if (root.right != null
               && root.data != root.right.data)
               return false:
       return isUnivalTree(root.left)
               && isUnivalTree(root.right);
```

```
}
public static void main(String[] args){
       Node root = newNode(1);
       root.left = newNode(1);
       root.right = newNode(1);
       root.left.left = newNode(1);
       root.left.right = newNode(1);
       root.right.right = newNode(1);
       if (isUnivalTree(root)) {
               System.out.print("YES");
       }
       else{
               System.out.print("NO");
       }
}
}
Solution 2:
Time Complexity: o(n)
Space Complexity: o(n)
class Node{
       int data;
       Node left, right;
       public Node(int item)
       {
               data = item;
               left = right = null;
       }
}
class Solution{
       Node root;
       void mirror(){
               root = mirror(root);
       }
```

adirchaudhary200@gmail.com

```
Node mirror(Node node){
       if (node == null)
               return node;
       /* do the subtrees */
       Node left = mirror(node.left);
       Node right = mirror(node.right);
       /* swap the left and right pointers */
       node.left = right;
       node.right = left;
       return node;
}
void inOrder(){
       inOrder(root);
}
void inOrder(Node node){
       if (node == null)
               return;
       inOrder(node.left);
       System.out.print(node.data + " ");
       inOrder(node.right);
}
public static void main(String args[]){
       BinaryTree tree = new BinaryTree();
       tree.root = new Node(1);
       tree.root.left = new Node(2);
       tree.root.right = new Node(3);
       tree.root.left.left = new Node(4);
       tree.root.left.right = new Node(5);
       System.out.println("Inorder traversal of input tree is:");
       tree.inOrder();
       System.out.println("");
       tree.mirror();
       System.out.println("Inorder traversal of binary tree is: ");
       tree.inOrder();
```

}

```
adirchaudhary200@gmail.com
```

```
Solution 3:
```

}

```
Time Complexity: o(n)
Space Complexity: o(1)
class Solution {
static class Node {
       int data;
       Node left, right;
}
static Node newNode(int data){
       Node newNode = new Node();
       newNode.data = data;
       newNode.left = null;
       newNode.right = null;
       return (newNode);
}
static Node deleteLeaves(Node root, int x){
       if (root == null)
               return null;
       root.left = deleteLeaves(root.left, x);
       root.right = deleteLeaves(root.right, x);
       if (root.data == x && root.left == null && root.right == null) {
               return null;
       return root;
}
static void inorder(Node root){
       if (root == null)
               return;
```

inorder(root.left);

```
System.out.print(root.data + " ");
       inorder(root.right);
}
public static void main(String[] args){
       Node root = newNode(10);
       root.left = newNode(3);
       root.right = newNode(10);
       root.left.left = newNode(3);
       root.left.right = newNode(1);
       root.right.right = newNode(3);
       root.right.right.left = newNode(3);
       root.right.right = newNode(3);
       deleteLeaves(root, 3);
       System.out.print("Inorder traversal after deletion: ");
       inorder(root);
}
}
Solution 4:
Time Complexity: o(n*n)
Space Complexity: o(n*n)
import java.util.HashMap;
public class Solution {
       static HashMap<String, Integer> m;
       static class Node {
               int data;
               Node left;
               Node right;
               Node(int data){
                      this.data = data;
                      left = null;
                      right = null;
              }
       }
```

```
static String inorder(Node node){
               if (node == null)
                       return "";
               String str = "(";
               str += inorder(node.left);
               str += Integer.toString(node.data);
               str += inorder(node.right);
               str += ")";
               if (m.get(str) != null && m.get(str)==1)
                       System.out.print( node.data + " ");
               if (m.containsKey(str))
                       m.put(str, m.get(str) + 1);
               else
                       m.put(str, 1);
               return str;
       }
       static void printAllDups(Node root){
               m = new HashMap<>();
               inorder(root);
       }
       public static void main(String args[]){
               Node root = null;
               root = new Node(1);
               root.left = new Node(2);
               root.right = new Node(3);
               root.left.left = new Node(4);
               root.right.left = new Node(2);
               root.right.left.left = new Node(4);
               root.right.right = new Node(4);
               printAllDups(root);
       }
}
```

Solution 5:

```
Time Complexity: o(n)
Space Complexity: o(1)
class Node {
       int data;
       Node left, right;
       public Node(int item) {
               data = item;
               left = right = null;
       }
}
class Res {
       public int val;
}
class Solution {
       Node root;
       int findMaxUtil(Node node, Res res) {
               if (node == null)
                       return 0;
